

Custom Designs for Any Product Application

Partner Pak is a leader in developing innovative, sustainable packaging designs to meet the needs of virtually any company. Innovative packaging technology allows manufacturers to meet the "Green" initiatives designed by major retailers to protect the environment. Our designs are fully recyclable and source separable. They are theft resistant for retailers, but easy for consumers to open. And, our UV sealing system requires 50% to 90% less energy than RF, sonic or heat sealing methods.

Partner Pak has been granted many patents by the USPTO, and designed a variety of sustainable, source-separable packaging for several major manufacturers.
